[SOW 4403: Research Methods in Social Work Practice]

Date of Submission

Abstract:

Purpose:

Objective:

Methods/Results:

Implications:

Alignment with Competencies (CSWE, EPAS 2022):

Keywords: anxiety, depression, emotional tendencies, treatment, Level of Stability Index for Children (LSIC)

Full Title of Research (as introduction)

Theoretical Framework: (Maximum 2 theories)

Systematic Review of the Literature: (minimum 10 tables – one page per table required; full reference citation must be included in separate list at the end of the final proposal).

Authors (Year)	Selection Criteria	Population/ Purpose	Methodology	Results/ Discussion
McMillan & Abell (2006)	Keywords: Level of Stability Index for Children (LSIC); children; assessment; depression; suicide ********** PAES: Pediatric Anger Expression Scale STAXI: State-Trait Anger Expression Inventory CDI: Child Depression Inventory SEM: Structural Equation Modeling (Quantitative research design).	Sample of children and youth ages 7-17 years of age from various school and community settings (N=400+). Researchers indicate that the LSIC is a multidimensional, self-report, rapid assessment instrument used to assess emotional and behavioral tendencies in children and teens who demonstrate self harm or possible harm to others. LSIC describes children's propensity toward depression, suicidal ideation, anger, and aggression.	Data analyzed using quantitative design methods; SPSS processing of raw data; Self-report survey instruments (PAES, STAXI, CDI) including the LSIC and measures for construct validation were administered to the purposive sample of children and youth; Confirmatory factor analyses were conducted using the multiple group method and SEM. Also used convergent and discriminant analyses.	Researchers indicate that the LSIC can be included as a clinical tool to help with counseling, supervision, and treatment for children and adolescents in need of care. Future research should examine the correlation of these factors with childhood anxiety.

Sample- completed table.
